

# States of Matter

## ACROSS

2. The process that changes a solid to a liquid
4. Particles are able to flow over each other
6. The process that changes a liquid to a gas

## DOWN

1. When gas or liquid particles become more spread out over time
3. The process that changes a liquid to a solid
5. Particles are in a fixed position and vibrate on the spot
7. Particles move randomly and are well spaced out
